Practical - 3

Practical Title: Responsive UI Design using CSS Grid, Flexbox, and Bootstrap/Tailwind

Problem Definition: Design responsive layouts for Home, About, Registration, Dashboard, and Events pages using CSS Grid and Flexbox. Optional to use CSS framework such as Bootstrap or Tailwind. Ensure mobile-first responsiveness.

- **Theory**

1. How does the layout adapt for mobile, tablet, and desktop screens?

Answer: The layout is responsive. On mobile, the content is shown in a single column. On tablets, the sections adjust with proper spacing. On desktop, all sections use the available screen space to give a better view.

2. Which layout technique is used and why?

Answer: I am Using Vscode For CSS for Reswonponsive UI Design For All Pages.

3. Which layout technique is used and why?

Answer: I used clear fonts, proper spacing, and colors with good contrast so that the text is easy to read and the website looks clean.

4. Is the framework used consistently without unnecessary inline CSS?

Answer: Yes. I used the framework consistently and kept the styling in external CSS files. I avoided unnecessary inline CSS to keep the code organized and easy to maintain.

- ## Implementation

In this practical, the foundational structure of the StudentHub Portal was implemented using HTML5. The following key elements and tags were utilized:-

Basic HTML Skeleton:- Used <!DOCTYPE html>, <html>, <head>, and <body> to structure all 10 web pages.

Navigation:- Implemented a consistent global navigation bar across all pages using <nav> with anchor tags <a> for links.

Forms & Input:- Created user authentication and contact pages (Register.html, Contact.html) using the <form> tag along with various <input> types (text, email, password) and <button> elements.

Content Organization :- Used semantic tags like (<header> ,<footer> ,<main>) and container to organize the dashboard

- ## Evidence of Work (Screenshots)

- **GitHub Repository Link :**

  https://github.com/25dce037-tech/Student-Hub-Portal.git

- **Challenges Faced :**

To Learn Every Tag uses Like for indivisual like for Font, Backgroundcolour specially color combination ,background image and Used media tag also For Mobile How To Set Everuthing.

- **Learning Outcomes :**

I Learned How To Make Attractive And Fascinating Page So User Can Attracte And Not being Bored.Also How To link CSS to HTML Pages using Link Tag.Also Importances Of External CSS and HTML5.

- **Faculty Remarks :**
